Lean Canvas: StudyPilot

Adaptive practice that finds weak math and science topics and serves the right problems | IBM SkillsBuild Masterclass 5

1. PROBLEM

- Every student gets the same homework, whatever they have already mastered.
- Teachers cannot track each student's quiz results topic by topic in large classes.
- Students find out about weak topics only at exam time.

Existing alternatives: textbook exercises, generic quiz apps, coaching classes, manual teacher review.

4. SOLUTION

- Logs every quiz answer by topic and difficulty.
- A mastery model scores each topic and flags the weakest.
- Serves customised practice problems and shows progress to student and teacher.

8. KEY METRICS

- Quiz score improvement over time.
- Weekly active learners.
- Free-to-paid conversion.
- Schools onboarded.

3. UNIQUE VALUE PROPOSITION

- A practice coach that learns what you find hard and serves the next problem you need.

High-level concept: a personal tutor in a quiz app.

9. UNFAIR ADVANTAGE

- Growing question bank tagged by topic and difficulty.
- Anonymised learning data that improves recommendations.
- Teacher and school partnerships.

5. CHANNELS

- Schools and subject teachers.
- Coaching centres.
- Student clubs and study communities.
- Study creators on YouTube and Instagram.

2. CUSTOMER SEGMENTS

- Students in grades 8 to 12 practising math and science in India.
- Early adopters: Class 9 and 10 students and the schools and coaching centres serving them.
- Secondary: teachers, tutors and parents.

7. COST STRUCTURE

- Cloud hosting and storage.
- Question-bank creation and teacher review.
- Development and model work.
- Marketing and school outreach.
- Data security and support.

6. REVENUE STREAMS

- Freemium: limited daily practice for every student.
- Premium student plan: unlimited practice and detailed reports.
- School licences with a teacher dashboard and class analytics.
